

BioKill™ -150

Odor Eradicator—Autos, Trucks, RV's

Model 150

Miracle Revenue Generator

Car dealers will gladly pay a service fee per vehicle of up to 1/2 % of your BioKill capital cost to quickly remove tobacco odor using this miracle product. It allows them to suddenly move unsalable inventory worth thousands of dollars per car. Within several hundred jobs the product has paid for itself and *the rest is your profit.* Works on RV's, buses, trucks, trains, boats, aircraft.

Run inside using the car's own battery.

HOW IT WORKS

This product works by **first dislodging contaminant molecules** (odors, mold, mildew, bacteria, virus) from the surfaces where they cling, suspending them in vehicle air that is then sucked into the unit. Inside they impact a hydroxyl radicals cloud where they are permanently destroyed. To accomplish this BioKill™ starts with ozone, created cleanly from the vehicle's own air to perform the dislodging and suspension steps. The clean ozone reaches down into the car's air conditioning system to temporarily dislodge contaminants coated on the condenser fins. Suspended in the flowing air, the contaminants are carried into the BioKill™ where they collide with a dense cloud of hydroxyl free radicals inside the unit. Those highly reactive chemical species aggressively pull electrons out of all the contaminants long chain carbon molecules, disassembling their organic matter. Once started, the dismantling process cascades, eventually **eradicating all the contaminants fragments**, reverting their matter back to the natural elements from which it was composed, primarily carbon, nitrogen hydrogen, and oxygen molecules. The eradication process is instant at the molecular level, without residue.

BioKill™ creates "clean ozone" in a closed treatment area, unlike simple ozone machines which need outside air. (Those use an electric spark that also creates toxic nitric oxide and caustic nitric acid unless the air going into them is carefully pre-dried. Those also require the user to clean their spark plates.) BioKill™ is self-contained, requires no air drying, creates no toxic side effect chemicals, and actually uses moisture in normal air to help create its powerful dismantling species. Unlike ozone generators, BioKill™ follows through to eradicate the contaminants that are dislodged by its clean ozone and it is essentially self-cleaning.

Tobacco odor is a huge obstacle to automobile sales and rentals. This product eliminates tobacco tar films and odor instantly, producing miracle results, over and over. It will even eradicate those failed "masking perfumes" that are sometimes sprayed into stinky cars. No need for long extension cords or moving vehicles to a treatment stall. BioKill™ can be used in vehicles where they are parked, using the car's own power. BioKill™ can also be used with or without attached hoses to generate revenue by **removing vehicle toilet smells** in RV's, trucks, buses, trains, boats, aircraft.

Can also be used outside with hoses and 110AC or an inverter.

Property Decontamination Products

MS #032218

Features

- Portable-15 lbs; 26" x 8" x 6"
- 2.5" hose ports
- Pushbutton job time
- Approximately 30 minutes per vehicle
- Hose and inverter included.

Performance

- Removes Odors from Germs, Pets, Food, Children, Tobacco
- Smoke, water damage removal
- Paint smell removal

"Rotten Eggs" Odor Elimination

Hydrogen Sulfide - one cubic meter test chamber
